Module 9: Solutions to Recommended Exercises

TMA4268 Statistical Learning V2022

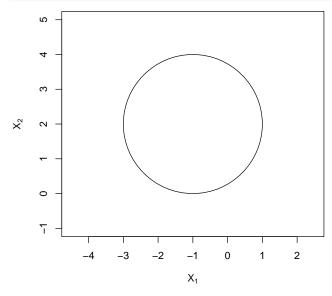

Kenneth Aase, Emma Skarstein, Daesoo Lee, Stefanie Muff Department of Mathematical Sciences, NTNU

March 16, 2023

Problem 2

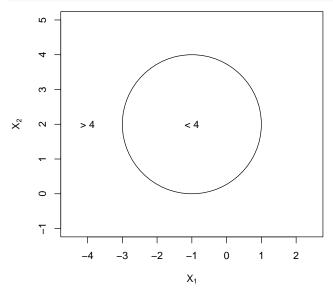

a)

The curve is a circle with center (-1,2) and radius 2. You can sketch the curve by hand. If you want to do it in R, you can use the function symbols() (this is a bit advanced, though):

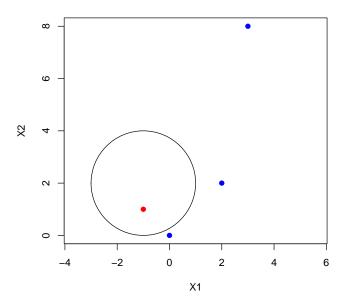

b)

Again, feel free to do this by hand. A simple R solution could look like this:

c)

You can do this by hand. Here we again use R and color the points according to the class they belong to:

d)

Since equation

$$(1+X_1)^2 + (2-X_2)^2 = 4.$$

or

$$X_1^2 + X_2^2 + 2X_1 - 4X_2 + 1 = 0$$

includes quadratic terms, the decision boundary is not linear, though it's linear in terms of X_1^2 , X_2^2 , X_1 , and X_2 .

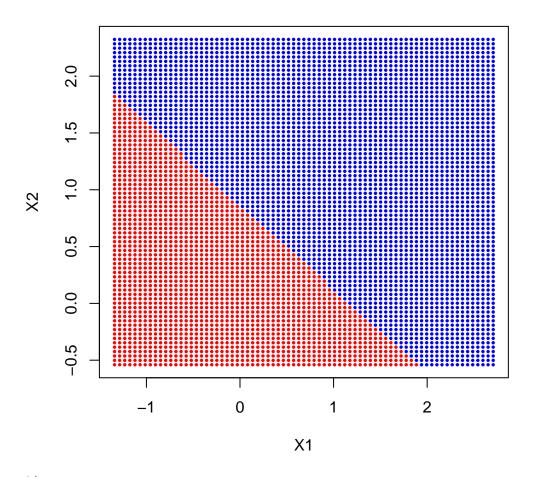

Problem 3

```
# code taken from video by Trevor Hastie
set.seed(10111)
x <- matrix(rnorm(40), 20, 2)
y <- rep(c(-1, 1), c(10, 10))
x[y == 1, ] <- x[y == 1, ] + 1
plot(x, col = y + 3, pch = 19, xlab = expression(X[1]), ylab = expression(X[2]))</pre>
```

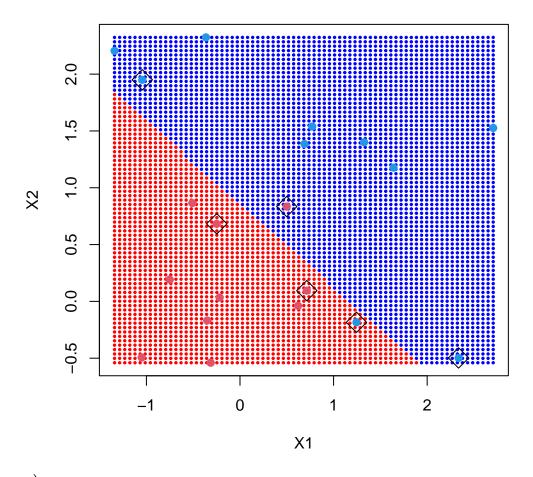

```
dat <- data.frame(x, y = as.factor(y))</pre>
```

```
\mathbf{a})
```

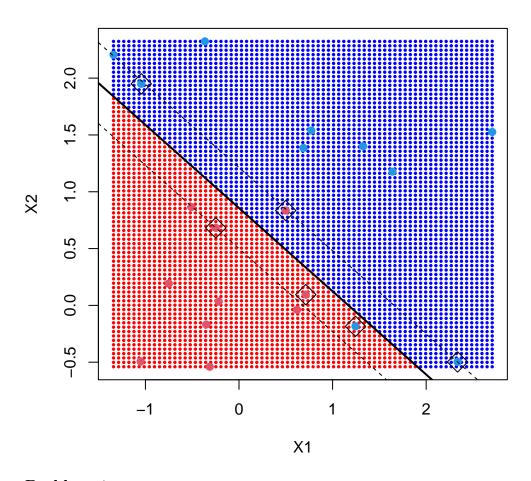

```
library(e1071)
svmfit <- svm(y ~ ., data = dat, kernel = "linear", cost = 10, scale = FALSE)</pre>
# grid for plotting
make.grid <- function(x, n = 75) {
  \# takes as input the data matrix x
  # and number of grid points n in each direction
  # the default value will generate a 75x75 grid
  grange <- apply(x, 2, range) # range for x1 and x2</pre>
  # Sequence from the lowest to the upper value of x1
  x1 <- seq(from = grange[1, 1], to = grange[2, 1], length.out = n)</pre>
  # Sequence from the lowest to the upper value of x2
  x2 <- seq(from = grange[1, 2], to = grange[2, 2], length.out = n)</pre>
  # Create a uniform grid according to x1 and x2 values
  expand.grid(X1 = x1, X2 = x2)
x <- as.matrix(dat[, c("X1", "X2")])</pre>
xgrid <- make.grid(x)</pre>
ygrid <- predict(svmfit, xgrid)</pre>
plot(xgrid, col = c("red", "blue")[as.numeric(ygrid)], pch = 20, cex = 0.5)
```

```
b)
plot(xgrid, col = c("red", "blue")[as.numeric(ygrid)], pch = 20, cex = 0.5)
points(x, col = y + 3, pch = 19)
points(x[svmfit$index, ], pch = 5, cex = 2)
```

```
c)
beta <- drop(t(svmfit$coefs) %*% x[svmfit$index,])
beta0 <- svmfit$rho
plot(xgrid, col = c("red", "blue")[as.numeric(ygrid)], pch = 20, cex = 0.5)
points(x, col = y + 3, pch = 19)
points(x[svmfit$index,], pch = 5, cex = 2)
abline(beta0 / beta[2], -beta[1] / beta[2], lwd = 2) # Class boundary
abline((beta0 - 1) / beta[2], -beta[1] / beta[2], lty = 2) # Class boundary-margin
abline((beta0 + 1) / beta[2], -beta[1] / beta[2], lty = 2) # Class boundary+margin</pre>
```

Problem 4

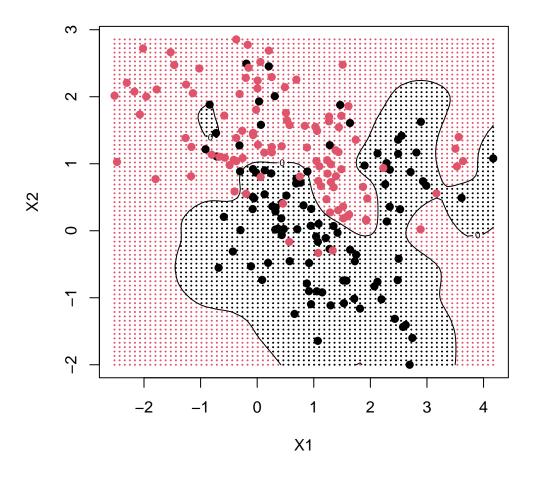

```
load(url("https://web.stanford.edu/~hastie/ElemStatLearn/datasets/ESL.mixture.rda"))
#names(ESL.mixture)
rm(x, y)
attach(ESL.mixture)
plot(x, col = y + 1, pch = 19, xlab = expression(X[1]), ylab = expression(X[2]))
```

```
dat <- data.frame(y = factor(y), x)</pre>
```

```
##
## Parameter tuning of 'svm':
##
  - sampling method: 10-fold cross validation
##
## - best parameters:
    cost gamma
##
##
       1
            10
##
## - best performance: 0.165
##
## - Detailed performance results:
##
       cost gamma error dispersion
## 1 1e-02 1e-02 0.525 0.14191155
## 2 1e-01 1e-02 0.525 0.14191155

## 35 1e+03 1e+02 0.310 0.12202003
fit <- r.cv$best.model</pre>
```

Now we plot the non-linear decision boundary, and add the training points.

Problem 5

```
a)
```

```
library(ISLR)
data(OJ)
#head(OJ)
n <- nrow(OJ)
set.seed(4268)
train <- sample(1:n, 800)</pre>
OJ.train <- OJ[train, ]
OJ.test <- OJ[-train, ]</pre>
```

```
b)
library(e1071)
linear <- svm(Purchase ~ .,</pre>
               data = OJ,
               subset = train,
               kernel = "linear",
               cost = 0.01)
summary(linear)
##
## Call:
```

svm(formula = Purchase ~ ., data = OJ, kernel = "linear", cost = 0.01,

```
##
       subset = train)
##
##
## Parameters:
##
      SVM-Type: C-classification
    SVM-Kernel: linear
##
##
           cost: 0.01
##
## Number of Support Vectors: 431
##
##
    (217 214)
##
##
## Number of Classes: 2
##
## Levels:
## CH MM
We have 431 Support vectors, where 217 belong to the class CH (Citrus Hill) and 214 belong to the class
MM (Minute Maid Orange Juice).
